### Foliar Treatment 0-0.6-1

Envigor is a trio of chemical compounds designed for generating conditions optimal for yield and nutrient uptake due to increased abiotic stress tolerance. During stressful conditions such as heat and drought, Envigor is proven to increase yield on corn, soy and vegetables when applied midseason.

**DIRECTIONS FOR USE:** Shake well before use. Apply to foliage with or without tank mixtures at a rate of 3.2 fl oz/acre and use 10 gallons/acre of water as a carrier. Envigor contains a surfactant, no additional surfactants are needed prior to application. If mixed with any fungicide, herbicide or insecticide, use recommended carrier rate for the tank mix as described by the manufacturer and test mixes in a jar prior to use.

**SPRAY TIMING:** Apply between R1-R3 for soybean, V4-V7 and/or VT post pollination for corn and at bloom for most other crops and vegetables.

**COMPATABILITY:** Envigor is non-phytotoxic and compatible with most commonly used foliar treatments including insecticides, fungicides, micronutrients, zinc, and biostimulants. Pilot test compatibility of all chemical mixes.

**STORAGE:** Store optimally at temperatures between 33°F and 100°F. Under these conditions Envigor will remain viable for 24 months. When stored for prolonged periods above 100°F Envigor slowly lose its efficacy and will be viable for less than 24 months.
